

## Connect, Communicate and Collaborate

Psion Teklogix' PTX Connect™ is an enterprise communication software platform, that offers mobile workers a wide range of communication options. PTX Connect expands the data collection functionality of a device into a more robust mobile computer that supports added features such as text and voice messaging, real time voice communications, in addition to regular data collection activities. This technology permits the mobile enterprise to reduce operational and support costs, improve workflow efficiency and workforce communication, hence improving its bottom line.

With PTX Connect, mobile workers may now operate their mobile computing terminal using walkie-talkie style Push-To-Talk VoIP, as well as a combination of server-based voice, text and scribble messaging options, to communicate with co-workers in any environment.

### FEATURES

- **Closed-Loop System:** administrators are more in control of network traffic and usage, as messages can be logged and filtered.
- **Scalable Client-Server Architecture:** increase your deployment size without compromising performance or quality of service
- **Push-to-Everything Multi-Modal Communication:** one platform for data and voice exchange
- **Presence:** automatically discover which users are online and offline
- **Server Based, Store-and-Forward Capable Message Boxes:** messages are sent to online users immediately, or stored on a server and sent when users log in.
- **Easily Configurable:** manage user accounts and workgroups, create policies, generate reports, log and filter messages, track and control employee usage
- **Unique User Interface:** graphical action buttons, unified mailbox, and discovery feature allow you to communicate one-to-one and one-to-many, peer-to-peer and peer-to-supervisor
- **Interoperable:** communicate with Windows CE and Windows Pocket PC (Windows Mobile) devices

### ADVANTAGES

- **Improve Operational Efficiency and Workflow Effectiveness:** PTX Connect enables you to improve communication among the warehouse and mobile workers and supervisors
- **Reduce Operational and Support Costs:** by using a single multi-purpose device for data and image capture, data and voice messaging, and broadcast communication.
- **Improve Network Usage and Security:** PTX Connect enables administrators to monitor, log and archive messages flowing through the closed-loop network

## Specifications

### SYSTEM REQUIREMENTS

- PTX Connect Server (Soapbox Server), Microsoft Windows® 2003 Server Edition, Windows XP Pro: Pentium 4 3+ GHz, 2+ GB RAM. Installations over 10 users requires access to a MS SQL Server 2000 or higher.
- PTX Connect Clients – Microsoft Windows CE 4.2, Windows Mobile 2003 SE

### SUPPORTED DEVICES

- Psion Teklogix Hand-held Devices: Workabout Pro (C, S)
